

# Methods and equipments for post irradiation testing at Kiev Institute for Nuclear Research

V. Revka, L. Chyrko, Yu. Chaikovsky,  
S. Kovbasenko, Yu. Gulchuk

*Radiation Material Science Department  
Institute for Nuclear Research, Kiev, Ukraine*

# Hot cell laboratory at KINR

46<sup>TH</sup> Annual Meeting "Hot laboratories and remote handling HOTLAB 2009", 20 – 23 September, 2009, Prague, Czech Republic

- Eight hot cells
- Radioactive waste handling
- Milling cutter machine
- Servo hydraulic testing machine
- Pendulum impact tester
- Electromechanical testing machine
- Electro erosion discharge machine
- Electron beam welding machine
- Metallographic microscope

# Experience in post irradiation testing

46<sup>TH</sup> Annual Meeting "Hot laboratories and remote handling HOTLAB 2009", 20 – 23 September, .2009, Prague, Czech Republic

- Investigation of structural materials for nuclear reactors in the frame of research programs
  - Tension and Charpy impact tests
  - Metallographic microscopy
- Analysis of technological fuel channel damages for Chernobyl NPP
  - Tension testing
  - Metallographic microscopy analysis
- Surveillance specimen program
  - Tension and Charpy impact tests
  - Fracture mechanics testing
- Reconstitution technique is going to be used at present

# Charpy impact testing

46<sup>TH</sup> Annual Meeting "Hot laboratories and remote handling HOTLAB 2009", 20 – 23 September, 2009, Prague, Czech Republic

- Pendulum impact tester KMD-30D
- C-type pendulum
- Temperature chamber with specimen feed system
- According to GOST 9454
- Capacity: 300 J
- Temperature range: - 150 to 350°C
- Impact velocity: 5.5 m/s

# Tension and fracture mechanics testing

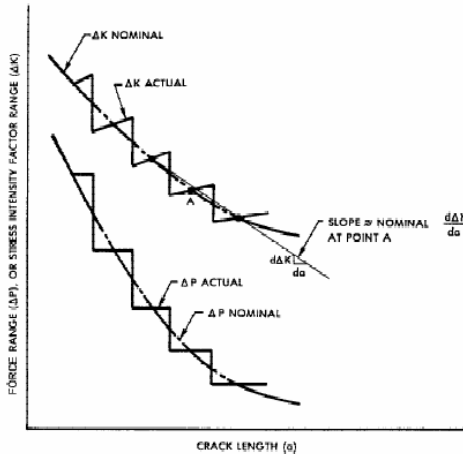

46<sup>TH</sup> Annual Meeting "Hot laboratories and remote handling HOTLAB 2009", 20 – 23 September, 2009, Prague, Czech Republic

- Electromechanical actuator
- Static load: 100 kN
- Temperature range: - 150 to + 350°C
- Fracture toughness tests according to ASTM E1921-05
- Fracture mechanics specimens: precracked Charpy and compact 0.5T C(T)
- Surveillance tests: tension and fracture toughness specimens

# Specimen pre-cracking equipment

46<sup>TH</sup> Annual Meeting "Hot laboratories and remote handling HOTLAB 2009", 20 – 23 September, 2009, Prague, Czech Republic

- Servo-hydraulic testing machine
- Dynamic load:  $\pm 50$  kN
- Temperature range: - 100 to + 350°C
- Frequency: up to 20 Hz
- $K_{max}$  decreasing method used
- Crack size estimation: compliance method
- According to ASTM E1921-05
- Specimens: Charpy size SE(B) and compact 0.5T C(T)

# Reconstitution technique

46<sup>TH</sup> Annual Meeting "Hot laboratories and remote handling HOTLAB 2009", 20 – 23 September, 2009, Prague, Czech Republic

- Electron beam welding machine
- Power density:  $10^7$  Wt/cm<sup>2</sup>
- $U_{acc} = 50$  kV
- $I_{beam} = 30 \div 40$  mA
- Vacuum:  $\sim 10^{-4}$  mbar
- Specimen type: Charpy V-notch and precracked Charpy
- Central insert size: 17 mm
- Specimen machining: Electro erosion discharge machine
