

* Preparatory Study on Analysis of Fuel debris

- Task 1: Joint study on fuel debris characterization
 - Debris location in unit 1-3, Fukushima daiichi NPP
 - Debris properties in location

- Task 2: Identifying needs and major issues for future fuel debris analysis
 - Needs for analysis, from decommissioning point of view; Criticality, Containment Cooling function, Radiation exposure
 - Major issues for sampling; Analysis methods, Facility demands, Transport, Accounting, etc.
 - Hot testing facilities; Capable of debris analysis

- Task 3: Planning future international R&D framework

 Presentation on 11th
